

RECOMMENDATIONS

Recommendation 31.1: Create a new category of ToO for surveys that need to define large numbers of targets within well-defined regions after the semester begins.

Recommendation 31.2: Reconsider allowing limited term partners to apply for Poor Weather time as there is no operational reason to prohibit this.

Recommendation 31.3: Cease balancing time now. No imbalances to be applied for 17A and going forward. FT time should also not be balanced or traded against ToOs. When the software is ready (17B) include calibrations (and other overheads, if possible) in each observation in the PIT automatically (based on instrument and mode). Existing LLPs should remain unchanged but new LLPs include calibrations (and other overheads, if possible) as done for the regular programs.
